

The Lubrication Solution for Tortilla Ovens

- Environmentally friendly. Oil particles are not atomized. Therefore, no harmful/unpleasant fog. Less waste of oil.
- Fully stand alone with on-board timer or ties into existing controls.
- Reduced power costs due to lower resistance.
- Increased output and production up-time.
- Reduced component cost with extended life of chain and wear pads.
- Compact, stand-alone design can be retrofitted with ease.
- Unmatched lubricant delivery accuracy.
- Air-Oil is NOT affected by viscosity or variations. A change of oil in the older mist lubricators can change/stop functionality.
- Cuts air consumption from mist systems.
- Cuts oil consumption from mist & brush oiling systems.
- Easily add and remove nozzles without system redesign.
- One pump for all oven sizes.
- Available as a modular assembled panel, Oil Streak Generator for “plug and play.”
- Ease of installation, the assembled panel requires only compressed air and power.
- Custom systems available in a NEMA enclosure suitable for clean in place protection.

PROVEN QUALITY, RELIABILITY & ACCURACY.

Overview

The Air-Oil system delivers high efficiency lubrication for fast moving chains and other applications requiring accurate oil deliveries, in combination with air flow. The Air-Oil Unit is versatile and allows multiple configurations outlets that enable systems to be designed to suit various applications. Air operated Airmatic pump is available as an option.

Application

These new units lubricate with a fine Air-Oil mix that lowers air consumption and reduces oil fog.

The SureFire II lubricator is available with an on/off timer (no monitoring) or a controller (monitors oil level and pressure switches) making it easy to adjust lubrication cycles for the tortilla oven.

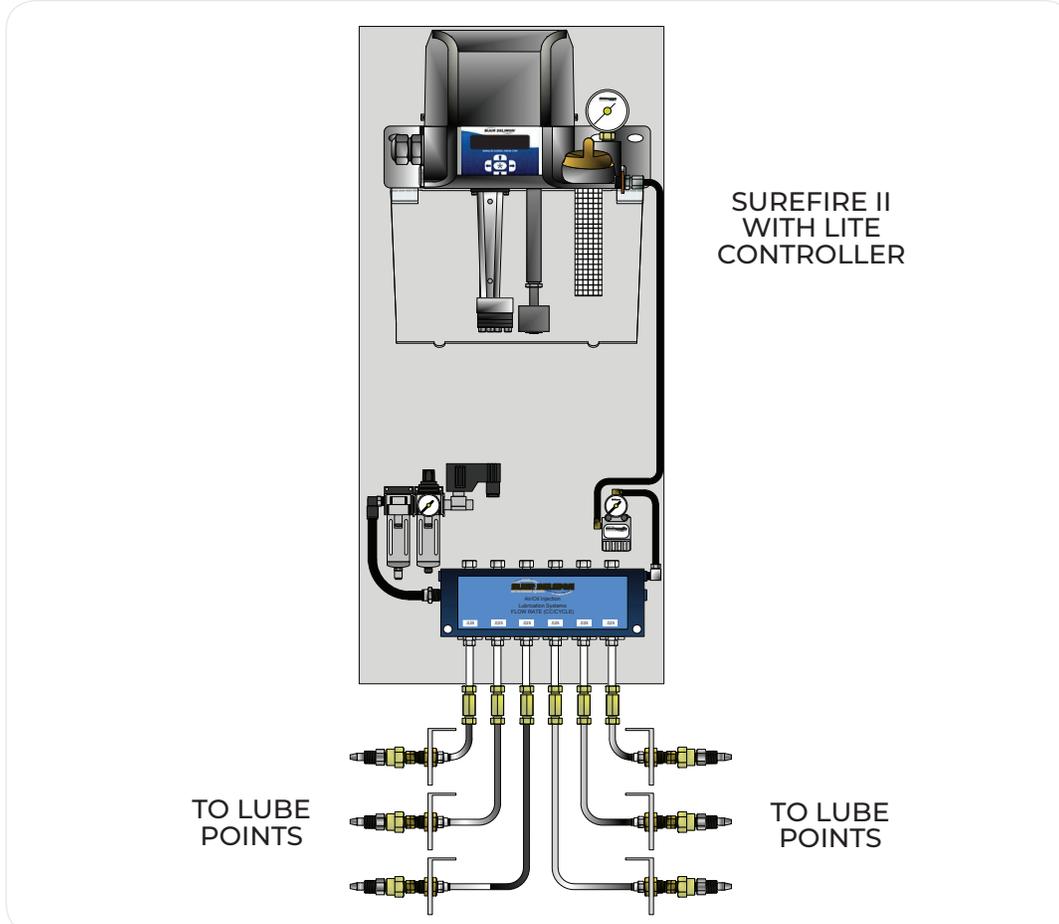

Systems include four outlet Air-Oil blocks with four nozzles. Additional Air-Oil blocks and nozzles can be added to the system.
