

## The Lubrication Solution for Snow Plows

### STATE OF THE ART LUBRICATION SYSTEMS FOR SNOW PLOWS

- The system greases every point while the snow plow is in operation and maintains a constant barrier at bushings preventing sand and salt from entering wear surfaces.
- Increased safety as there is no need to crawl under or over equipment to service hard-to-reach lubrication points.
- Extend service life, reduce operative costs and lubricant costs.

*Adding a Bijur Delimon lubrication system increases equipment life by decreasing wear on vital components. Automatic lubrication systems safely and continuously supply lubricant while your machine is running.*

# PROVEN QUALITY, RELIABILITY AND ACCURACY.

## Dynamis Maxx Lubricator

The Dynamis Maxx Lubricator is our most robust pump designed for the harshest environments. It is particularly suited for cold temperatures with its push/pull piston configuration. The Dynamis Maxx Lubricator is an electrically driven piston pump designed for use with series progressive systems. Large reservoir capacities are available (4L and 8L, 8 pounds and 16 pounds).

Dynamis Maxx Lubricator

## PVBM Progressive Valve

The corrosion resistant PVBM Divider Valve dispenses lubricant to as many as 20 outlet lines at operating pressures up to 3600 psi. This compact valve can be located near the lube points to accurately dispense grease automatically to the entire machine. Valves are available with cycle indicator pins to provide visual confirmation of system operation. In addition, the cycle pin can be fitted with a switch to provide electrical feedback to a system controller.
